

Like Mike II

General Instructions:

Tension adjustment:

Loosen the nylon tip locking set screw with the .050 hex key. Turn the tension adjustment screw clockwise for more tension and counterclockwise for less tension. Tighten the nylon tip locking screw to keep the tension set screw in place. Remember, it is a nylon tip so you will only need to snug it when tightening and not overtighten. It is supplying sufficient force to keep the tension screw from moving. The Like Mike II has a tension range from approximately 1.5 pounds to a maximum of 5 pounds. For heavier trigger tensions you can install the supplied ball under the tension screw for increased poundages. The Like Mike II features the new Controlled Engagement System so there is no trigger travel adjustment required.

General Use:

To load the Like Mike II, simply hold the jaw in the closed position with your index finger and push the sear beneath it closed with your thumb. Keep your index finger away from the trigger while drawing until you are ready to fire. When ready, simply apply pressure to the trigger to fire the release.
